

Make a Digit AI mask

Digit AI loves to make fun things and to reveal his creative side. Can you unmask your imagination and create your very own Digit AI mask following the instructions below?

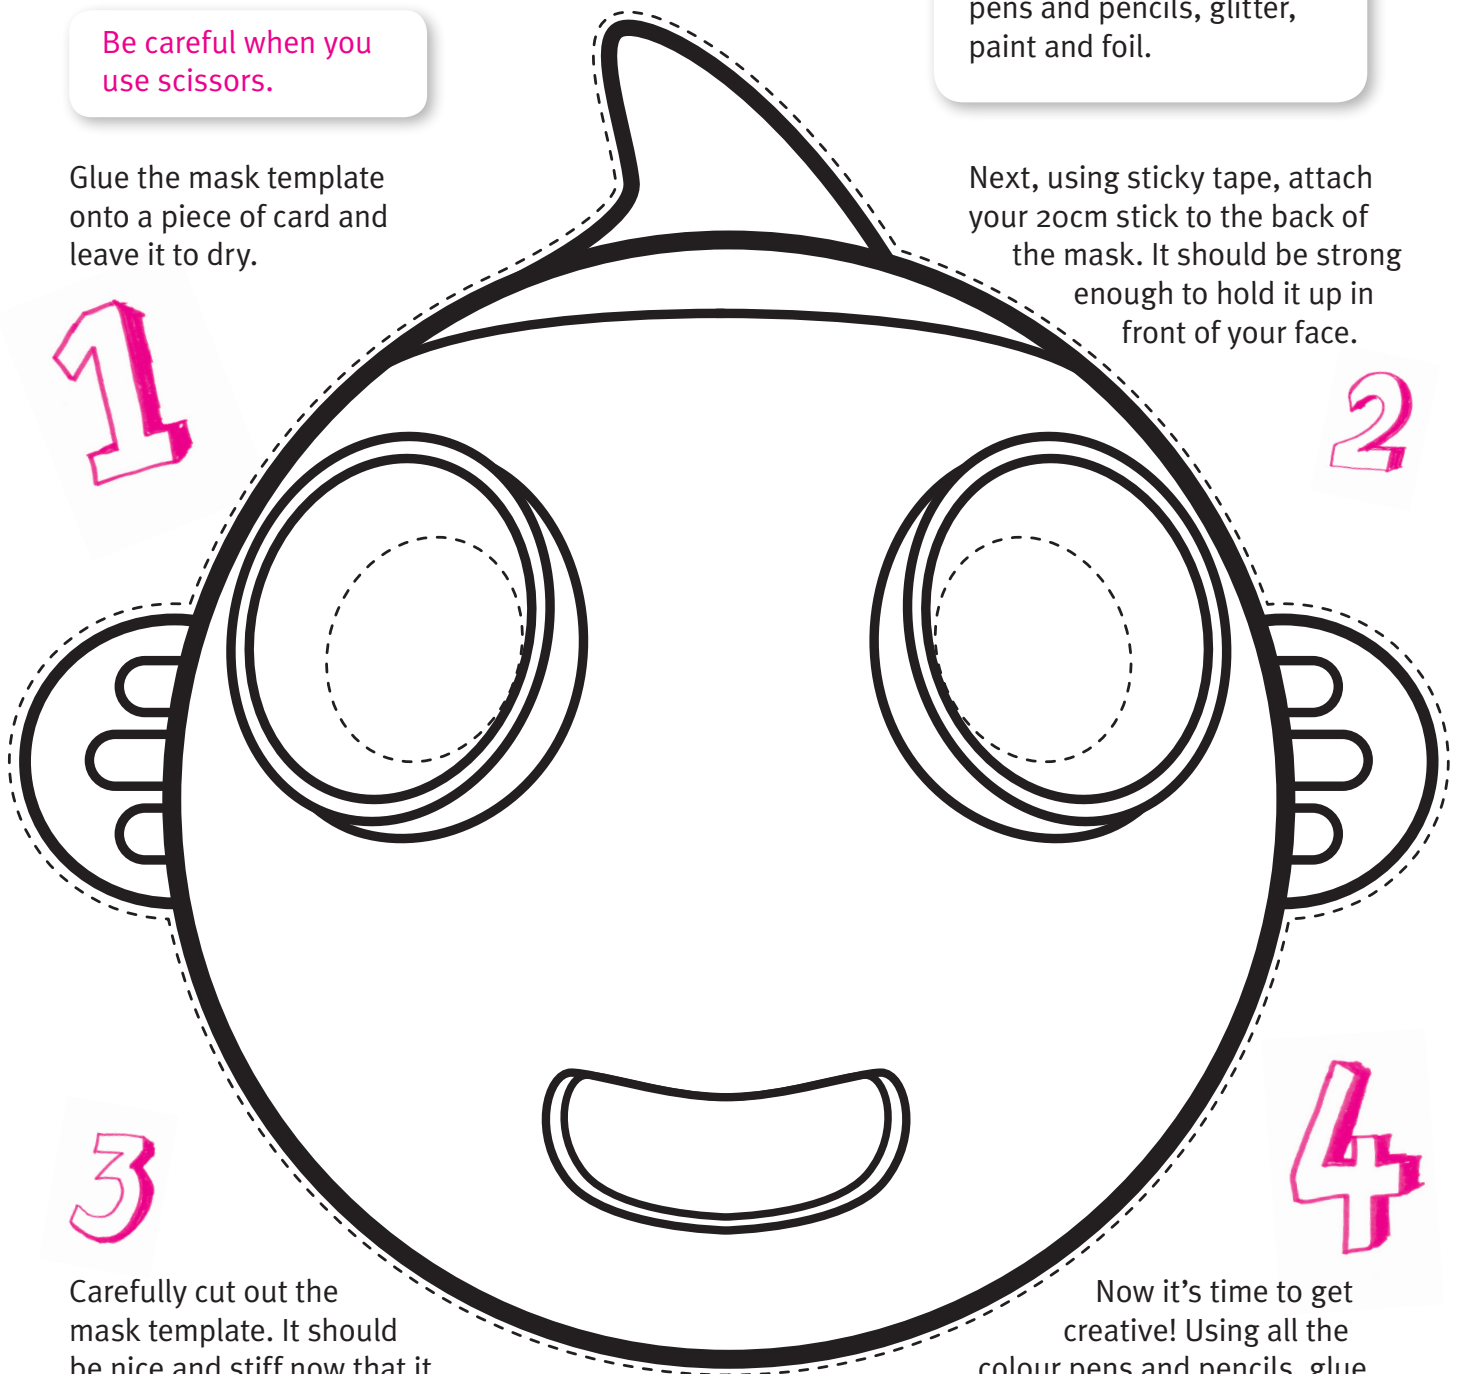

Be careful when you use scissors.

Glue the mask template onto a piece of card and leave it to dry.

You will need...

Scissors, card, a 20cm stick, sticky tape, colour pens and pencils, glitter, paint and foil.

Next, using sticky tape, attach your 20cm stick to the back of the mask. It should be strong enough to hold it up in front of your face.

Carefully cut out the mask template. It should be nice and stiff now that it is glued to the card. Remember to cut out the eye holes. Ask a grown-up if you find it tough.

Now it's time to get creative! Using all the colour pens and pencils, glue and foil, decorate your Digit AI mask. What will yours look like?
